

Keshav Ghai

MERN Developer & Aspiring AI Engineer

+91 7657805107 | ghaikeshav55@gmail.com | Greater Noida, India

GitHub | Portfolio

PROFESSIONAL SUMMARY

Full-stack developer and AI Engineer currently pursuing a BS degree in Data Science and Applications from IIT Madras. Strong expertise in the MERN stack and hands-on ML experience through internships and freelance client work. Built production-style web apps, AI-powered tools, and desktop software using React, Node.js, Go, TensorFlow, and local LLMs. Looking for a Software / Full-Stack / ML Engineer Intern role where I can ship real features and own end-to-end development.

EDUCATION

IIT Madras (Online)

May 2026 (Admitted)

BS in Data Science and Applications

NxtWave Institute of Advanced Technologies

Dropped Out

B.Tech Computer Science Engineering (AI/ML Specialization)

Noida International University | Industry-aligned curriculum covering MERN Stack, DSA, System Design & AI/ML

Punjab Board of School Education (PSEB)

2024

Senior Secondary (Class 12)

Score: 84% | JEE Mains 2024: 84.1 Percentile

CERTIFICATIONS

IBM Data Science Professional Certificate

IBM via Coursera

February 2026

Comprehensive 12-course program covering the full data science lifecycle — Python, SQL, data analysis, machine learning, deep learning, and data visualization. Completed capstone projects with real-world datasets, predictive models, and interactive dashboards.

[View Certificate](#)

AWS Cloud Practitioner Essentials

Amazon Web Services via Coursera

March 2026

Introductory AWS course covering core cloud concepts, AWS services, security, architecture, pricing, and support. Gained foundational knowledge of compute, storage, networking, and database services in the AWS ecosystem.

[View Certificate](#)

TECHNICAL SKILLS

Languages

JavaScript/TypeScript, Python, C++, SQL, Go

Frontend

React 18, HTML5, CSS3, Tailwind, Bootstrap, shadcn/ui

Backend

Node.js, Express.js, FastAPI, REST APIs, JWT Auth

Databases

MongoDB (Atlas, Motor, Beanie), PostgreSQL, SQL

AI/ML

TensorFlow, Scikit-learn, ONNX, OpenCV, NumPy, Pandas, Matplotlib, OCR (Tesseract.js), Prompt Engineering

DevOps / Tools

Git/GitHub, Docker, AWS, Prometheus, Grafana, VS Code, Google Colab, Vercel, Netlify, Electron

KEY STRENGTHS

- Full-Stack Development:** End-to-end web application development with MERN stack
- Problem Solving & DSA:** Strong foundation in data structures and algorithmic thinking
- Quick Learner:** Proven ability to rapidly adopt new technologies and frameworks
- Leadership & Teamwork:** Experience leading technical teams and mentoring peers
- AI/ML Integration:** Practical experience integrating AI APIs into production applications
- Public Speaking:** Comfortable presenting technical concepts to

Applied Software Engineering Fundamentals

IBM via Coursera

March 2026

5-course specialization covering the Software Development Lifecycle, Git & GitHub workflows, Linux commands & shell scripting, Python for AI & data science, and building AI applications with Python and Flask.

View Certificate

EXPERIENCE & LEADERSHIP

Data Science Intern

Mar 2026 – Jun 2026

Unified Mentor Pvt. Ltd. | Remote

- Contributing to end-to-end ML pipelines for real client datasets using Python, Pandas, and Scikit-learn, focusing on cleaning, feature engineering, and model training.
- Building evaluation scripts and dashboards to visualize model performance and insights for non-technical stakeholders.
- Collaborating with senior mentors to document experiments and improve reproducibility.

Freelance Full-Stack Developer

Green LeafX | Sustainability Education Platform

- Built a sustainability education platform with automated video feeds and modular course content using Python (Flask) and a custom admin dashboard.
- Integrated YouTube Data API v3 to auto-ingest and categorize educational videos, reducing manual content curation time.
- Designed a responsive “Eco”-themed UI with glassmorphism, improving mobile usability and engagement.

Operations Head

Dec 2025 – Feb 2026

Advanced Tech Club, NxtWave Institute

- Organized technical workshops, hackathons, and CP sessions; led events with 100+ participants and coordinated speakers and mentors.
- Mentored junior developers on Git/GitHub, MERN basics, and project structure, strengthening the club's project output.

PROJECTS

Guidon's Eye | Privacy-First Productivity Assistant

Status: Prototype Ready

Built a desktop overlay that tracks active applications and provides context-aware productivity nudges for developers and knowledge workers.

- Implemented local activity logging and privacy-first storage so no data leaves the user's machine.
- Integrated conversational AI backend for natural-language commands and automation.

Technology Stack: Electron, Node.js, MongoDB, Google Gemini, Axios, Winston

turboSH | AI-Powered Optimization Middleware

Status: Complete

Developed a middleware layer that sits between clients and backend services to schedule, rate-limit, and cache requests.

- Implemented ML-based anomaly detection (SVM, Isolation Forest) to flag and mitigate suspicious traffic in near real-time.
- Exposed metrics to Prometheus and visualized system health in Grafana dashboards.

diverse audiences

- Adaptability:** Flexible approach to changing requirements and project scopes

SPOKEN LANGUAGES

English — Fluent

Hindi — Fluent

Punjabi — Fluent

INTERESTS

Game Development • Competitive Programming • AI & Machine Learning • Web Architecture • Writing & Technical Blogs • Anime & Gaming • Open Source Contribution

Technology Stack: Go (gin), Python (Scikit-learn, ONNX), Prometheus, Grafana, Docker

LawBuddy AI | Local LLM Legal Assistant

Status: Complete

Created a legal assistant powered by a fine-tuned local LLM (no external APIs or cloud), enabling fully offline analysis and drafting.

- Implemented document drafting and case management features stored in a JSON-based local datastore.
- Designed the system as a privacy-first alternative for small firms and individual practitioners.

Technology Stack: Node.js, Express.js, Custom Ollama Model, HTML/CSS/JS

MedSafe | AI-Powered Medication Safety Platform

Status: Prototype Ready

Built a prototype web app that analyzes potential drug interactions and flags possible counterfeit medicines using OCR + AI.

- Implemented dashboards for healthcare providers with real-time safety insights and patient-level risk views.

Technology Stack: React 18, TypeScript, Tailwind, shadcn/ui, PostgreSQL, Edge Functions, Gemini 2.0 Flash, Tesseract.js
